

## **Scenario 1**

### **In this scenario Covid-19 is suspected but not confirmed**

- Anyone with Covid Symptoms should immediately cease training with the club
- The individual should arrange to have a Covid test
- Until the result of the test is known the individual should not return to training
- Siblings should not attend training until the result of the test is known
- If no tests are available then the swimmer/polo player and any siblings should not train for 14 days from the onset of symptoms

If the result of the test is negative then the individual and any siblings can return to training immediately

## **Scenario 2 – Covid is confirmed**

### **In this scenario an individual has received a positive Covid-19 test**

- The individual should not train with the club for 14 days after the positive test
- Siblings should not train with the club for 14 days after the positive test
- The club will notify everyone who has recently trained in the same session as this individual. In addition the club will inform the relevant people if the positive test came from someone in their lane bubble.
- There is no need for the rest of the lane bubble to isolate as we operate social distancing measures.
- N.B Track and Trace may contact the club or individuals and provide advice. In this case their advice must be followed.

If two positive Covid tests are confirmed from within one lane bubble then the bubble would “burst” and the entire lane would not be able to attend swimming for 14 days from the date of the second positive test.

If subsequent positive tests occurred within the training group then the whole group may be asked to stop training. This will be managed on a case by case basis taking into account all relevant factors.

## **Scenario 3**

In this scenario an individual is having to isolate due to positive test in a school bubble

- The individual should not attend training
- Any siblings can still attend training
